

Conventional, straight cut carrying handles for plastic packaging are often sharp-edged and do not provide a carrying comfort especially with heavy products like beverages (picture 1).

A solution for this problem is the unique comfort carrying handle system for beverages from DIENES (German utility model 20 2014 104 270). With its wave-like edges the carrying handle adapts to the hand of the carrier and provides a lot more carrying comfort without generating additional production cost (picture 2)

The self-adhesive carrying handle can be used with all beverage packaging (e. g. 1.5 l bottles) as well as in the food and hygiene industry.

Picture 1:
Conventional carrying handle
with straight edges
(little carrying comfort,
Feeling of cutting in)

Picture 2:
DIENES comfort carrying handle with wave-like edges
(adapting carrying handle, higher carrying comfort)
