

We manufacture guide rails and slide rails in various geometric cross-sections up to a one-piece length of 3,500 - 4,000 mm. Longer multi-part overall lengths are possible. Detailed inspection reports can be prepared.

Intermediate lengths are possible by splitting. The drilling pattern continues at the joints.

Materials: Tool steels, special steels  
Hardening: tempering, through hardening, surface hardening, laser hardening

#### **Tolerances of the long parts:**

Parallelism: up to 0.01 mm  
Flatness: up to 0.01 mm  
Straightness: up to 0.02 mm  
Angularity: up to 0.02 mm

#### **Advantages:**

- | Individual tool design
- | Professional advice on materials and processes
- | All tools can generally be regrinded or reworked
